

## NOVA Chemicals Joffre Site

# North Rail Interchange and Loading Yards

Our rail yard is one of the largest industrial rail storage facilities in North America. It is used for storage and dispatch of rail cars containing inbound raw materials and finished products. The rail storage area occupies 57 acres immediately north of the Joffre Site.

**Responsible operations** - Noise generation from rail facilities are an important consideration. Two new, quieter locomotives also feature increased fuel efficiency, significantly less emissions and a design that reduces the potential for fuel-related spills.

On site and North Rail facilities comprise:

**37 miles of track**

**60 storage tracks.**

**Storage capacity for 895 hopper cars and 443 tank cars (1338 total).**

**A total of 163 track switches**
