

Our Sustainability Strategy

NOVA Chemicals helps shape a world where products vital to our health and happiness are even better tomorrow than they are today.

Our Sustainability Journey

 **NOVA** Chemicals®

Our Roadmap for the Future

NOVA Chemicals embraces global approaches to sustainability that recognize the role of business as a positive catalyst for change. We are committed to bold collaboration with diverse stakeholders to create shared value for our business and society.

A Plastic Circular Economy

We recognize the value in post-use plastics and strive to create a world free of plastic pollution. We are working with many stakeholders to extend the lifecycle of plastics and to reach plastics industry goals to recycle or recover 100% of plastic packaging by 2040.

Climate Care

NOVA Chemicals is committed to responsibly managing our greenhouse gas emissions and promoting and maintaining sustainability throughout our operational facilities.

Sustainability Citizenship

As a responsible global citizen, NOVA Chemicals will collaborate and provide leadership to select challenges and opportunities that promote natural resource conservation and in particular ocean health.

Sustainability Collaborator

We are actively pursuing collaboration partners to develop a portfolio of new and emerging sustainability technologies and innovations to more quickly and effectively achieve our sustainability goals.

Sustainability in Operations

We are committed to promoting and maintaining sustainability in operations. We will proactively and responsibly manage the water, land, air and biodiversity impacted by our operational facilities.

Sustainability Design & Integration

Sustainability will be implemented through organizational design and leadership, strategy, management systems and business processes. All employees will be engaged to help drive performance with our many stakeholders.
