

# Growing Our Ontario Operations

## Rokeby Site and the Corunna Cracker Expansion Project (Phase 3)

### New Polyethylene Facility

A second Advanced SCLAIRTECH™ technology facility (AST2) will be located at the new Rokeby Site, adjacent to our Corunna Site, in St. Clair Township, Ontario, Canada. With a capacity of approximately one billion pounds of polyethylene per year, the facility will allow us to continue to grow our polyethylene business in high performance applications and will provide greater supply reliability for our customers. We are excited to bring new premium-value, polyethylene resins for recyclable packaging to North American and global markets.

### Corunna Cracker Expansion (Phase 3)

This project is linked to the new polyethylene facility as it will provide ethylene feedstock. Construction of the two new heaters at the Corunna Site is complete and we finished the tie-ins to the rest of the facility during the site's turnaround. The expansion will increase the existing unit's current ethylene capacity by more than 50 percent.

### Quick Facts

- The Rokeby Site Operations Team is onsite to support commissioning activities and is preparing for a safe and successful start-up.
- Commissioning activities are progressing 24 hours a day, seven days a week.
- 1,500 skilled tradespeople are onsite to safely progress construction and commissioning.
- Construction is over 95 percent complete between both projects.
- On track to start up the facility in the first half of 2023.

Aerial views of Rokeby Site. These projects represent a more than \$2 billion (CAD) investment that will strengthen the area's growth and our long-term viability.
