

Future Rokeby Site Construction Newsletter

Issue #2 July 2018

Rokeby Line Reconstruction Update

Starting Tuesday, July 31, NOVA Chemicals' contractor, Cope Construction, will begin upgrades to Rokeby Line. Anticipated to last until October, this work involves widening of the paved shoulder and other paving improvements. The work is taking place between the intersection of Rokeby Line and Highway 40 up to our new main entrance at 804 Rokeby Line.

During this time, please be aware of the following traffic impacts:

- Rokeby Line from Highway 40 up to the main entrance will be **closed to all traffic** during working hours – weekdays from 7:00 am to 3:30 pm – for the duration of the road work. It will re-open to local traffic only during non-working hours. Arrangements are being made to accommodate residents living directly adjacent to this section of the road.
- Rokeby Line east of the main entrance and up to Tecumseh Line will be limited to local traffic only for the duration of the road work.

A traffic management plan is in place to mitigate traffic impacts and signage will be posted on roadways to facilitate the movement of traffic. Access to the road for emergency services and waste collection services will not be disrupted.

Please see the photo on the back page of this newsletter for a visual of the construction area.

Gravel Delivery Trucks Being Re-Routed to Accommodate Rokeby Line Reconstruction Work

An increase in gravel delivery trucks began in late June. The trucks are delivering gravel from Sarnia and Sombra to allow for the creation of parking lots and roadways on the construction site. We anticipate the current pace of six trucks per hour from 7:00 am to 5:30 pm to continue.

While the Rokeby Line reconstruction work is underway, trucks will enter and exit off Petrolia Line through Gate 3. Once Rokeby Line upgrades are complete, gravel delivery trucks will enter and exit the site via the Rokeby Site main entrance.

This newsletter is intended to share information on construction of our new Rokeby Site.

The project involves the construction of a second Advanced SCLAIRTECH™ technology facility (AST2) to be located at the new Rokeby Site, adjacent to our Corunna Site.

With a capacity of approximately one billion pounds of polyethylene per year, the facility will allow us to continue to grow our polyethylene business in high performance applications and will provide greater supply reliability for our customers. Construction is underway with start-up targeted for late 2021.

This project is part of a capital investment of approximately \$2 billion for two new significant projects for our St. Clair Township operations: the new polyethylene facility and the next phase in the expansion of our Corunna Site cracker.

Site preparations are underway and detailed engineering work continues, with approximately 70 local tradespeople currently on-site.
