

# Future Rokeby Site

## Construction Newsletter

Issue #10 June 2019

### First Large Hauls to Arrive this Summer

The first deliveries of equipment will arrive at Rokeby and Corunna Sites this summer. Depending on the size of each haul, community members may experience slow-moving traffic, road closures and, in some cases, electricity interruptions.

Deliveries will typically travel from the Sarnia or Courtright docks to our sites or local fabrication shops.

When appropriate, near-neighbours will be informed of estimated delivery timing and associated potential impacts.

### Afternoon Shift Added at Rokeby Site

On Monday, June 24, an afternoon shift (2:00 pm – 10:15 pm) will begin. Currently expected to continue through August, this shift will involve approximately 50 tradespeople. No noisy work (e.g. piling) is planned for this shift.

In keeping with the Township's by-law requirements and our Good Neighbour commitments, NOVA Chemicals and its construction workforce remain mindful of the need to manage construction-related impacts such as noise, light and dust.

This newsletter is intended to share information on construction of our new Rokeby Site.

The project involves the construction of a second Advanced SCLAIRTECH™ technology facility (AST2) to be located at the new Rokeby Site, adjacent to our Corunna Site.

With a capacity of approximately one billion pounds of polyethylene per year, the facility will allow us to continue to grow our polyethylene business in high performance applications and will provide greater supply reliability for our customers. Construction is underway with start-up targeted for late 2021.

This project is part of a capital investment of approximately \$2 billion for two new significant projects for our St. Clair Township operations: the new polyethylene facility and the next phase in the expansion of our Corunna Site cracker.

Construction is underway and detailed engineering work continues, with approximately 370 local tradespeople currently on-site.
