

Future Rokeby Site

Construction Newsletter

Issue #8 March 2019

24/7 Security Update

As of Monday, March 11 around-the-clock security coverage for the future Rokeby Site began. Neighbours may see a roving security guard in a Lyndon Security vehicle after hours and on weekends. Their route for inspection is inside the project fence.

Weekend Work Awareness

As our project progresses, some construction and project support activities may occur on weekends.

In keeping with the Township's by-law requirements and our Good Neighbour commitments, NOVA Chemicals and its construction workforce remain mindful of the need to manage construction-related impacts such as noise, light and dust.

On Saturday, March 16 and Saturday, March 23 piling is taking place starting at 9:00 am. This particular scope of work has been scheduled at a time when fewer workers are on site for added safety.

This newsletter is intended to share information on construction of our new Rokeby Site.

The project involves the construction of a second Advanced SCLAIRTECH™ technology facility (AST2) to be located at the new Rokeby Site, adjacent to our Corunna Site.

With a capacity of approximately one billion pounds of polyethylene per year, the facility will allow us to continue to grow our polyethylene business in high performance applications and will provide greater supply reliability for our customers. Construction is underway with start-up targeted for late 2021.

This project is part of a capital investment of approximately \$2 billion for two new significant projects for our St. Clair Township operations: the new polyethylene facility and the next phase in the expansion of our Corunna Site cracker.

Site preparations are underway and detailed engineering work continues, with approximately 260 local tradespeople currently on-site.
