

Community Notice:

Joffre Site Ethylene 1 (E1) maintenance turnaround planned

Our E1 facility will be shut down from mid August to end of September/mid-October 2021 for a turnaround.

What can you expect?

- Flaring during plant shut-down and start-up
- An increase in contractors to site (approximately 1,000 contractors at peak)

How are we minimizing impact?

- West access to site temporarily opened for usage
- Staggered shifts
- No bussing due to COVID restrictions — contractor orientation reinforcing ‘road etiquette expectations’ while travelling through farming communities

Other planned maintenance activities:

- Polyethylene 1 (PE1) Major Outage: mid-September 2021
- Ethylene 3 (E3) Turnaround: mid-May to end June 2022
- PE1 Turnaround: end June to end July 2022

What is a turnaround?

Turnarounds offer us the opportunity to conduct maintenance and renewal of our facilities outside of our day-to-day maintenance activities.

Why do we flare?

Flaring is considered to be a safe, environmentally acceptable way to dispose of hydrocarbons — required when a plant needs to isolate for maintenance activities and during emergency events.

ATTENTION TO NEIGHBOUR IMPACTS IS ALWAYS A PRIORITY
